PRECISION AND PERFORMANCE

Let me introduce myself, Hugues Vaillancourt, owner of Antler Firearms, the composite division as well as Nutech, a CNC machine shop on lathes and machining centers.

We employ more than 120 employees and own 40 CNC machines. We have been manufacturing gun parts for major gun manufacturers for over 30 years.

I combined my experience as well as the expertise of my team to design the best rifle on the market.

To obtain a high precision rifle, every little detail is important, especially when shooting over long distances. There are so many external factors that can influence our performance that's why its essential to trust perfectly your gun. For over 45 years, precision and quality is what distingues us.

Hugues Vaillancourt, President

Antler Firearms, was created in 2014, under the name of Fierce Canada. Following a reorganisation, we changed our name in order to distinguish ourselves from our American partner Fierce Firearms. Our rifles, which were known as Fierce, will now be known as "Antler".

Our team has worked hard in research and development to come along with technical improvements to our rifles that will allow you to increase your experience. Our finishes have also been carefully harmonized with the nature of elements. Our rifles are entirely made in Quebec: from design to manufacture. We have a show room directly at our factory, is located in Disraeli near Thetford Mines. Our rifles are light, precise and efficient. These qualities are not the result of chance, but the accuracy of every detail that makes us appreciated and recognized.

Our expertise, manufacturing processes and quality control enables us to machine complex components to the exact requirements. Our work is based on cutting-edge equipment, the continual improvement of our procedures and constantly searching for new approaches. We use noble materials such as titanium, which has mechanical properties that make it possible to shape thin and light parts. Carbon fiber stocks and barrels are made by our Composite division. We have chosen carbon for its tensile, compressive and stiff properties as well as its excellent temperature of retention.

Throughout the manufacturing process, accurate testing is done by using CMM, air gages and optical comparators to maintain extremely tight tolerances on parts. Accuracy tests are carried out in our underground shooting range so that each product is certified. Upon delivery, we guarantee that each gun must have ½ MOA (grouping 3 bullets within ½ inch over a distance of 100 yards) with the appropriate ammunition. The rifle is delivered with the target used during the accuracy tests. We keep the details of the ammunition used so that the customer can obtain the same ammunition.

EXPEDITION

STAINLESS STEEL ACTION AND BARREL

The "Expedition" rifle our primary model. Machined without fluting on the barrel and bolt.

At Antler, we know that trusting your rifle is essential. The "Expedition" model has been designed with the aim of going along with the hunter during crucial moments and to ensure that these moments become unforgettable hunting experiences.

2 types of STOCKS offered :
Standard | Thumbhole

3 lugs action, rotation 70°.
Without groove

Weight: 6.6 pounds
*Weights are always calculated on
.300 calibers WIN MAG, barrel 24 in

Limbsaver pad

Three position safety lock

Color: Coyote 107-007

Adjustable trigger, crisp 2 3/4

Detachable box magazine:
capacity: 4 ammo

The Antler logo is integrated
into all types of stocks

Cerakote coating

Stainless steel barrel (416) is full (without groove)

Muzzle brake MB42 is included
It is screwed at the end of the barrel

We build our own high-end, ultra-lightweight carbon fiber stocks. The fiber is stretched manually in the molds to increase rigidity in calculated places.

Carbon has very interesting properties: it is three times harder and 50% lighter than wood, which makes it a component of choice. In addition of being waterproof, resistant and requiring little care, carbon doesn't react with variations of temperature it remains accurate and so there is no unpredictable tensions between the barrel and the stock) Our stocks evenly distribute recoil. They are equipped with patented "Limbsaver" brand pads which are recognized for their quality of recoil absorption. It also has an adjustable cheek rest.

PRICE: 2195\$

WILD MOUNTAIN

STAINLESS STEEL ACTION AND BARREL

Wild Mountain is a combination of design and performance. Our machining experts, added an artistic touch to the barrel by machining it in a spiral fluting shape. Our finishes in earth tones give it lots of style and character.

From a technical aspect, the barrel grooves are formed with a button "butoff rifling" rather than cold forging. The advantage is that it induces little stress in the barrel, leaves few marks and increases the precision of the diameter of the barrel. The fluting also eliminate weight, promotes cooling, and in addition to improve the esthetic appearance. Spiral fluting barrels are available for WILD MOUNTAIN and TI MOUNTAIN models.

4 types of STOCKS offered :

Standard adjustable | Left-handed adjustable | LR Mountain adjustable | Thumbhole

Integrated base and recoil lug with right-handed gun

ACTION : The bases and the recoil lug are integrated into the action. This greatly contributes to increasing the precision of the mechanism by reducing the vibration

BARREL is manufactured from a high quality match grade of stainless steel (416). It is machined in a spiral fluting shape.

PRICE: 2 895\$

COLOR:
Midnight—Trophy
104-004

Weight:7.2 pounds

Spiral fluting barrel

Muzzle brake included

ANTLERARMS.COM

TI MOUNTAIN

TITANIUM ACTION / STAINLESS STEEL BARREL

This model is perfectly adapted for hunting which requires carrying your rifle over a long distance. **Weight** is an important factor to consider depending on your ability and the type of hunting you are doing. At the end of the day, a lighter rifle makes a big difference.

The titanium mechanism is the best on the market. This alloy is very strong, tough, light, resistant to corrosion and in addition it has a very interesting appearance.

Its weight is **50% lighter** than stainless steel.

4 types of STOCKS offered :

Standard adjustable | Left-handed adjustable | LR Mountain adjustable | Thumbhole

Integrated base and recoil lug
with right-handed gun

ACTION : The bases and the recoil lug are integrated into the action. This greatly contributes to increasing the precision of the mechanism by reducing the vibration

BARREL is manufactured from a high quality match grade of stainless steel (416). It is machined in a spiral fluting shape.

PRICE: 3 595\$

Spiral fluting barrel

Muzzle brake included

COULEUR:
Tungsten - Black
101-000

Weight: 6.7 pounds

CARBON MOUNTAIN

STAINLESS STEEL ACTION/ CARBON BARREL

The Carbon Mountain has a carbon barrel. This rifle is perfect for **magnum calibers** whose shots are very powerful and generate a lot of heat.

This barrel is stiffer, lighter and most importantly, it dissipates heat faster between shots than stainless steel barrels.

4 types of STOCKS offered :

Standard adjustable | Left-handed adjustable | LR Mountain adjustable | Thumbhole

Integrated base and recoil lug with right-handed gun

THE CARBON BARREL is made up of a stainless steel barrel that has been refined to make it as raw as possible and then surrounded by several layers of carbon fiber.

During manufacturing, the carbon is combined with the resin which is belted by heat treatment on 3 different axes of the barrel. The fiber is glued at high temperature along the entire length of the barrel so that each strand sticks perfectly to it. This method allows us to fuse metals (stainless steel and carbon) to obtain a single cylindrical body.

The result allows us to obtain a **lighter**, stiffer and also more **accurate** barrel; which has the property of dissipating heat more quickly.

Available with **CARBON MOUNTAIN & ROCKY MOUNTAIN** models

PRICE 3 295\$

Carbon finish

Muzzle brake included

COLOR: 002-102
Hunter Orange

Weight: 6.6 pounds

ANTLERARMS.COM

ROCKY MOUNTAIN

our elite model

TITANIUM ACTION / CARBON BARREL

The Rocky Mountain is our elite model. This rifle has all of our superior components and offers you optimal support in all situations.

We have **combined our know-how by pairing our exceptional carbon barrel and our ultra-light titanium action**. All you have to do is focus on your essential priorities... gaming, shooting and living out your **passion!**

4 types of STOCKS offered :

Standard adjustable | Left-handed adjustable | LR Mountain adjustable | Thumbhole

Integrated base and recoil lug with right-handed gun

COLOR: OD GREEN
103-003

COMPONENTS

We build our own high-end, ultra-lightweight carbon fiber stocks. The fiber is stretched manually in the molds to increase rigidity in calculated places.

Carbon has very interesting properties: it is three times harder and **50% lighter** than wood, which makes it a component of choice. In addition of being waterproof, resistant and requiring little care, carbon doesn't react with variations of temperature it remains accurate and so there is no unpredictable tensions between the barrel and the stock) Our stocks evenly distribute recoil. They are equipped with patented "Limbsaver" brand pads which are recognized for their quality of recoil absorption. It also has an adjustable cheek rest.

ACTION : The bases and the recoil lug are integrated into the action. This greatly contributes to increasing the precision of the mechanism by reducing the vibration.

Marking under the rifle

MUZZLE BRAKE MB42 : The Muzzle brake screws into the end of the barrel and it is equipped with 42 angle holes which allow gases to escape around the barrel, which reduces the recoil by approximately 50%. When designing, we added a 15 degree forward angle on all holes. This directs the sound shut away from the shooter. It is offered in stainless steel for barrels of the same type and in titanium for carbon barrels.

We use a **CERAKOTE PAINT COATING** on all our models to improve the strength and finish of our parts. This coating is the most efficient and has been validated by approved laboratories in terms of anti-corrosion and scratches. On the other hand, it facilitates sliding and wear limits, while reducing traditional greasing.

The various colors of finishes are shown on the next page

1/2 MOA
100 YARDS

PRECISION

Each ANTLER gun is CERTIFIED to group 3 bullets within 1/2 MOA over a distance of 100 yards with ballistics tested during quality control. Each rifle is delivered with the target which was used to test it.
